Capstone Connection Instructions

When connecting the data to view the analysis, complete the following:

1. Download all files from the datasets folder in git hub. The merged.csv file is the output
   from the Python script, so if running the script, a duplicate of that one will appear in your
   files. Also, download the file in the scripts folder.

2. Import the datasets into Google Colab. Keep the naming conventions already given to the
   datasets because the Python script is set to look for the current values.

3. Run the Python script and observe the output.

These data sources do not need to be refreshed and are not cloud based.

To connect to the Power BI file, it can be accessed through the github via download or this link:
